

## Solutions Assignment 4

Q: Write a Map Reduce program to filter out the invalid records. Map only job will fit for this context.?

Create Map Program in IntelliJ IDEA

- The project package used for this task is default. This task is done by Mapper class alone,

```
import org.apache.hadoop.io.LongWritable;
import org.apache.hadoop.io.Text;
import org.apache.hadoop.mapreduce.Job;
import org.apache.hadoop.mapreduce.Mapper;
import org.apache.hadoop.mapreduce.Reducer;
import org.apache.hadoop.mapreduce.lib.input.FileInputFormat;
import org.apache.hadoop.mapreduce.lib.input.TextInputFormat;
import org.apache.hadoop.mapreduce.lib.output.FileOutputFormat;
import org.apache.hadoop.mapreduce.lib.output.TextOutputFormat;
import org.apache.hadoop.util.GenericOptionsParser;

public class FilterInvalidMapper
    extends Mapper<LongWritable, Text, IntWritable, Text> {
    Text ValidData;
    IntWritable count;
    //first it will check the setup method in mapper class call
    public void setup(Context context){
        ValidData = new Text();
        count = new IntWritable();
    }

    @Override
    public void map(LongWritable key, Text value, Context context
    ) throws IOException, InterruptedException {
        String[] line = value.toString().split(regex: "\\n");
        if(!((line[0].matches(regex: "NA")) && !(line[1].matches(
            regex: "NA"))){
            ValidData.set(value);
            count.set(count.get()+1);
            context.write(count,ValidData);
        }
    }
}
```

FilterInvalidMapper → map()

- The main class to drive the above mapper class to identify the invalid data in this case "NA".

```
import org.apache.hadoop.mapreduce.Mapper;
import org.apache.hadoop.mapreduce.Reducer;
import org.apache.hadoop.mapreduce.lib.input.FileInputFormat;
import org.apache.hadoop.mapreduce.lib.input.TextInputFormat;
import org.apache.hadoop.mapreduce.lib.output.FileOutputFormat;
import org.apache.hadoop.mapreduce.lib.output.TextOutputFormat;
import org.apache.hadoop.util.GenericOptionsParser;

public class InvalidData {

    public static void main(String[] args) throws Exception {
        System.out.println("*****In the Driver Code*****");
        //Configuration Details w.r.to JOB,JAR etc
        Configuration conf = new Configuration();
        Job job = new Job(conf, "WORD COUNT JOB");
        job.setJarByClass(InvalidData.class);

        // Mapper , Combiner & Reducer Class Name details
        job.setMapperClass(FilterInvalidMapper.class);

        job.setOutputKeyClass(Text.class); //hadoop
        job.setOutputValueClass(IntWritable.class); //4

        // HDFS Input Path , HDFS Output Path Details
        FileInputFormat.addInputPath(job, new Path(args[0]));
        FileOutputFormat.setOutputPath(job, new Path(args[1]));

        //System Exit process
        System.exit(job.waitForCompletion(verbose: true) ? 0 : 1);
    }
}
```

- Execute the jar

```

n /var/spool/mail/acadgild
yarn]$ hadoop jar D0-IT.jar InvalidData /hadoop/television.txt /hadoop/invalidout
Code*****

```

- To view the out put file.

| Input   | Output   |
|---|--|
| Samsung Optima 14 Madhya Pradesh 132401 14200 | 1 Samsung Optima 14 Madhya Pradesh 132401 14200  |

## 2. Write a Map Reduce program to calculate the total units sold for each Company

- Mapper class for each company details and for total units input.

```

import org.apache.hadoop.mapreduce.lib.input.FileInputFormat;
import org.apache.hadoop.mapreduce.lib.input.TextInputFormat;
import org.apache.hadoop.mapreduce.lib.output.FileOutputFormat;
import org.apache.hadoop.mapreduce.lib.output.TextOutputFormat;
import org.apache.hadoop.util.GenericOptionsParser;

public class productmapper
    extends Mapper<LongWritable, Text, Text, IntWritable> {
    Text company;
    IntWritable count;
    //first it will check the setup method in mapper class call
    public void setup(Context context){
        company =new Text();
        count =new IntWritable( value: 1);
    }
    @Override
    public void map(LongWritable key, Text value, Context context
    ) throws IOException, InterruptedException {
        String[] line = value.toString().split( regex: "\\|");
        if(!((line[0].matches( regex: "NA")) && !(line[1].matches(
            regex: "NA")))){
            company.set(line[0]);
            context.write(company,count);
        }
    }
}

```

- Reducer class or total units and for each company

```
import org.apache.hadoop.io.IntWritable;
import org.apache.hadoop.io.Text;
import org.apache.hadoop.mapreduce.Reducer;
import java.io.IOException;

public class productreducer extends Reducer<Text,IntWritable,Text,IntWritable> {
    public void reduce(Text key,Iterable<IntWritable> values,Context context) throws IOException,InterruptedException {
        int sum = 0;
        for (IntWritable value: values){
            sum+=value.get();
        }
        context.write(key,new IntWritable(sum));
    }
}
```

- Driver class program

```
import org.apache.hadoop.conf.Configuration;
import org.apache.hadoop.fs.Path;
import org.apache.hadoop.io.IntWritable;
import org.apache.hadoop.io.Text;
import org.apache.hadoop.mapreduce.Job;
import org.apache.hadoop.mapreduce.lib.input.FileInputFormat;
import org.apache.hadoop.mapreduce.lib.input.TextInputFormat;
import org.apache.hadoop.mapreduce.lib.output.FileOutputFormat;
import org.apache.hadoop.mapreduce.lib.output.TextOutputFormat;

public class Company {
    public static void main(String[] args) throws Exception {
        System.out.println("*****In the Driver Code*****");
        //Configuration Details w.r.to JOB,JAR etc
        Configuration conf = new Configuration();
        Job job = new Job(conf, "per each company JOB");
        job.setJarByClass(Invalid1.class);
        job.setMapOutputKeyClass(Text.class);
        job.setMapOutputValueClass(IntWritable.class);
        job.setOutputKeyClass(Text.class);
        job.setOutputValueClass(IntWritable.class);
        job.setMapperClass(productmapper.class);
        job.setReducerClass(productreducer.class);
        job.setCombinerClass(productreducer.class);
        job.setNumReduceTasks(1);//set the reduce tasks to one
        job.setInputFormatClass(TextInputFormat.class);
        job.setOutputFormatClass(TextOutputFormat.class);
        FileInputFormat.addInputPath(job, new Path(args[0]));
        FileOutputFormat.setOutputPath(job, new Path(args[1]));
        System.exit(job.waitForCompletion(verbose: true) ? 0 : 1);
    }
}
```

- Jar file run on the Hadoop to get the each company wise total units.

```
[acagdild@localhost yarn]$ hadoop jar D0-IT.jar Company /hadoop/television.txt /hadoop/companyout
```

## Output

```
[acagdild@localhost yarn]$ hadoop fs -cat /hadoop/companyout/part-r-00000
18/05/19 23:54:24 WARN util.NativeCodeLoader: Unable to load native-hadoop library for your platform
asses where applicable
Akai      1
Lava      3
Onida     3
Samsung   7
Zen       2
```

3. Write a Map Reduce program to calculate the total units sold in each state for Onida company.

- Mapper class to get the input to the reducer class.

```
import org.apache.hadoop.mapreduce.lib.output.TextOutputStream;

public class onidasales {
    public static void main(String[] args) throws Exception {
        System.out.println("*****In the Driver Code*****");
        //Configuration Details w.r.to JOB,JAR etc
        Configuration conf = new Configuration();
        Job job = new Job(conf, "per each company JOB");
        job.setJarByClass(onidasales.class);
        job.setMapOutputKeyClass(Text.class);
        job.setMapOutputValueClass(IntWritable.class);
        job.setOutputKeyClass(Text.class);
        job.setOutputValueClass(IntWritable.class);
        job.setMapperClass(onidasalesmapper.class);
        job.setReducerClass(onidasalesreducer.class);
        job.setCombinerClass(onidasalesreducer.class);
        job.setNumReduceTasks(1); //set the reduce tasks to one
        job.setInputFormatClass(TextInputFormat.class);
        job.setOutputFormatClass(TextOutputStream.class);
        FileInputFormat.addInputPath(job, new Path(args[0]));
        FileOutputFormat.setOutputPath(job, new Path(args[1]));
        System.exit(job.waitForCompletion(verbose: true) ? 0 : 1);
    }
}
```

- Reducer class to get the total units sold for each onida use the Mapper class output.

```
import org.apache.hadoop.io.IntWritable;
import org.apache.hadoop.io.Text;
import org.apache.hadoop.mapreduce.Reducer;

import java.io.IOException;

public class onidasalesreducer extends Reducer<Text,IntWritable,Text,IntWritable> {
    public void reduce(Text key,Iterable<IntWritable> values,Context context)
        throws IOException,InterruptedException {
        int sum = 0;
        for (IntWritable value: values){
            sum+=value.get();
        }
        context.write(key,new IntWritable(sum));
    }
}
```

- Driver class to start the class and placed the combiner class(mini reducer).

```
import org.apache.hadoop.mapreduce.lib.output.TextOutputStream;

public class onidasales {
    public static void main(String[] args) throws Exception {
        System.out.println("*****In the Driver Code*****");
        //Configuration Details w.r.to JOB,JAR etc
        Configuration conf = new Configuration();
        Job job = new Job(conf, "per each company JOB");
        job.setJarByClass(onidasales.class);
        job.setMapOutputKeyClass(Text.class);
        job.setMapOutputValueClass(IntWritable.class);
        job.setOutputValueClass(IntWritable.class);
        job.setMapperClass(onidasalesmapper.class);
        job.setReducerClass(onidasalesreducer.class);
        job.setCombinerClass(onidasalesreducer.class);
        job.setNumReduceTasks(1); //set the reduce tasks to one
        job.setInputFormatClass(TextInputFormat.class);
        job.setOutputFormatClass(TextOutputStream.class);
        FileInputFormat.addInputPath(job, new Path(args[0]));
        FileOutputFormat.setOutputPath(job, new Path(args[1]));
        System.exit(job.waitForCompletion(verbose: true) ? 0 : 1);
    }
}
```

- Jar file to execute the get the required output.

```
[acadgild@localhost yarn]$ hadoop jar D0-IT.jar /hadoop/television.txt /hadoop/salesout
```

- OutPut file from hdf5.
